Balanced Sector Enhanced Portfolio

Balanced Sector Enhanced Investment Style

For sector enhanced accounts our goal is to utilize our econometric asset allocation models to generate high total returns during up markets, to preserve capital during declining markets, and to match or exceed the total return of a 60/40 Balanced Index. These models, which are comprised of absolute and relative valuation data for equity and fixed income markets, trigger portfolio purchases and sales in a highly disciplined manner. Mench Financial makes use of Exchange-Traded-Funds of domestic, international and fixed income securities to achieve competitive returns and lower deviations. Domestic ETF's hold a portfolio of common stocks that is intended to closely track the price performance and dividend yield of different domestic indices such as the S&P 500. International ETF's closely track the characteristics and performance of specific countries and regions outside the United States and are heavily traded on domestic exchanges. The fixed income portion of the portfolio is invested in ETF's of fixed income indices of varying maturities depending on the current interest rate outlook. A prospectus for each ETF can be obtained from your investment professional. The prospectus contains complete information on the fund's investment objective(s), the risks associated with the investment in the fund, the fees, charges and expenses involved, as well as other information about the fund. You should read and consider this information. These securities afford clients with a diversified portfolio and allow for more consistent returns versus comparable benchmarks over a market cycle.

Performance Numbers (Net-See Footnote 3)

Period ending September 30, 2018

Percentage Returns (Annualized One Year and Over)

	<u>Y-T-D</u>	<u>1 Year</u>	<u>3 Year</u>	<u>5 Year</u>	<u>8.9 Year</u>
